Maven web project
for
creating servlets and jsp

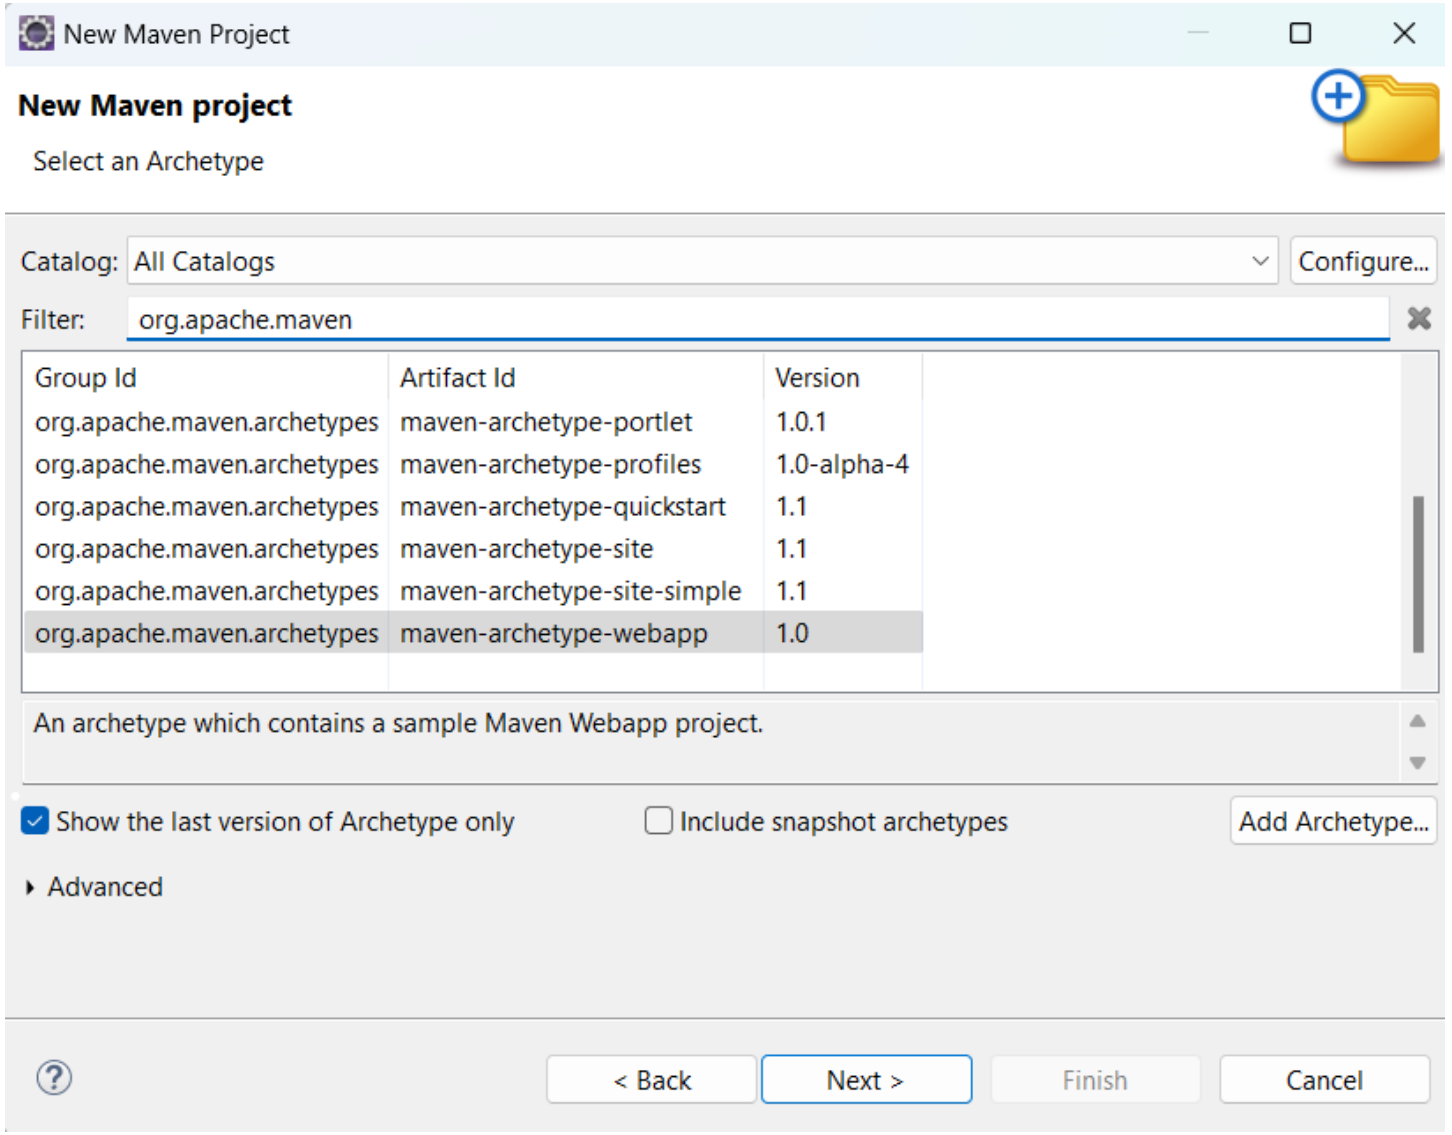

- **Goto FILE → NEW → MAVEN PROJECT .**
- **The following window will open. Simply click next.**

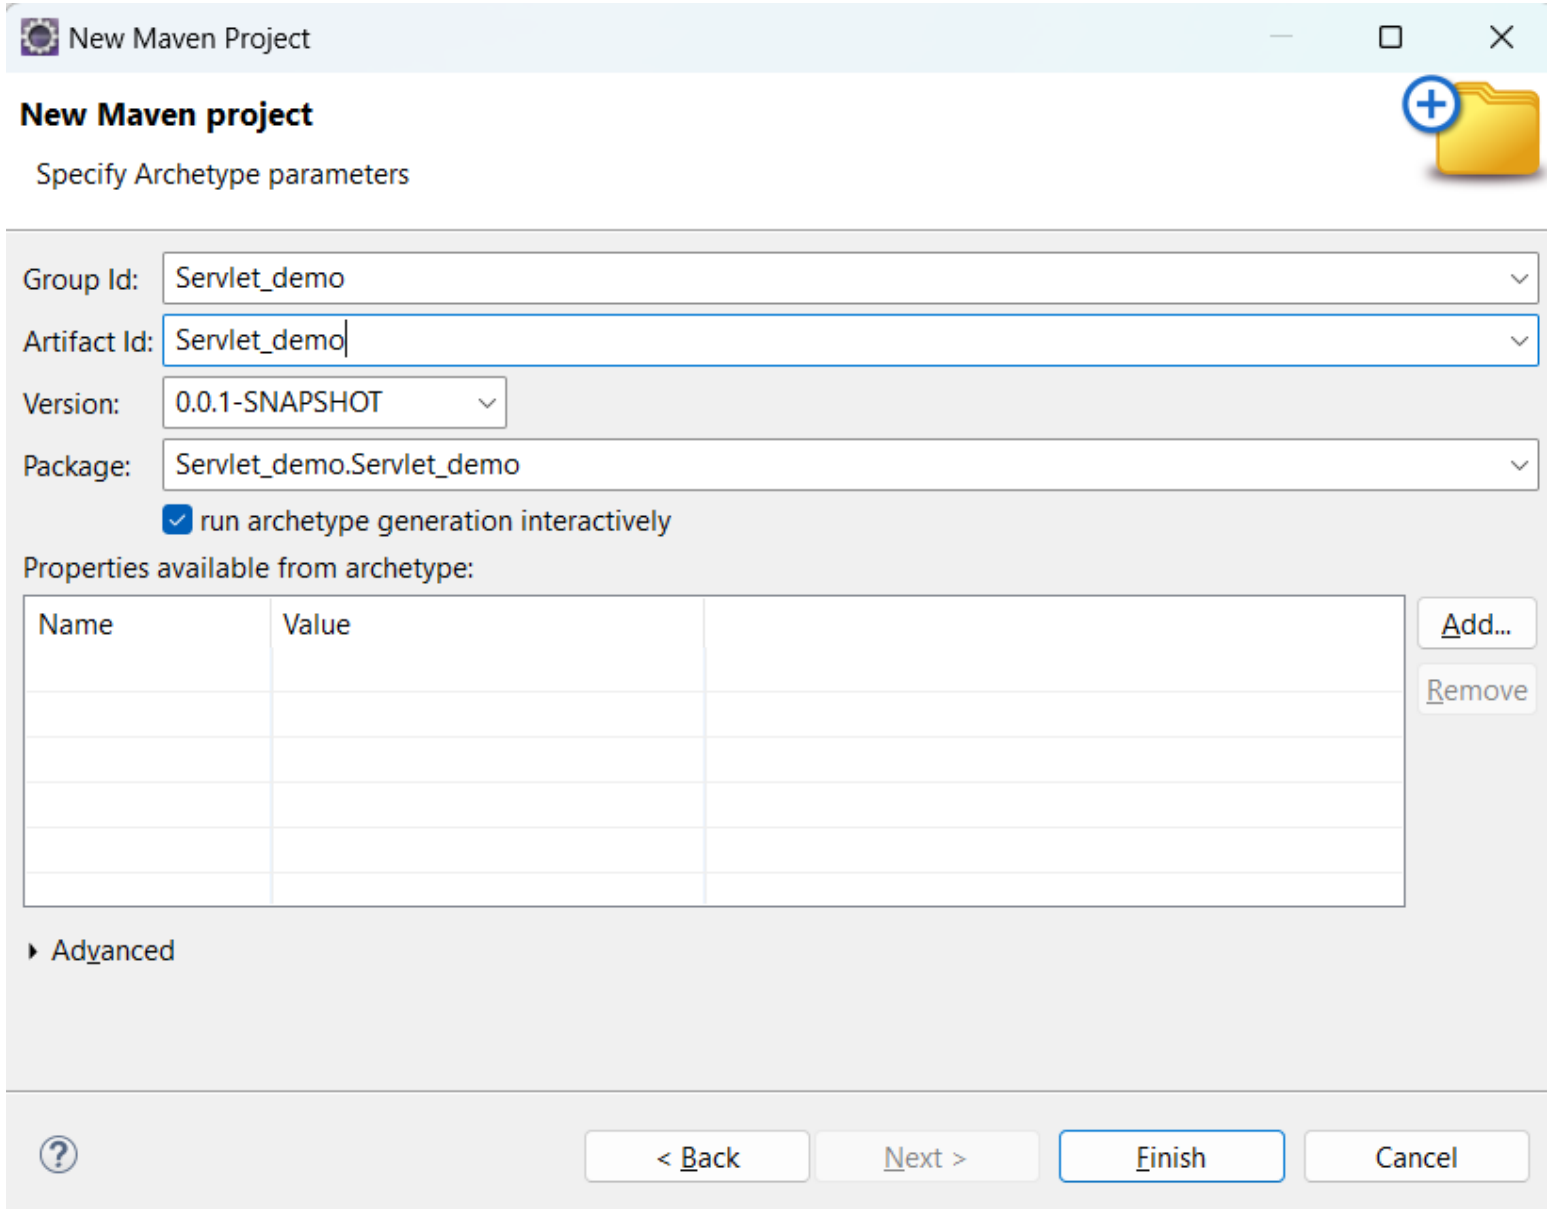

- **Here , wait until the group id , artifact id and versions will load .**

- **Once options are loaded , in filter , type org.apache.maven and select maven- archetype- webapp option and click next.**

- **Then , enter group ID and Artifact ID and click finish.**

- **During loading , we can see progress and some downloading info on the console :**

```
Progress (1): 16/16 MB
Progress (1): 16/16 MB

Progress (1): 16/16 MB
Progress (1): 16/16 MB
Progress (1): 16 MB

Downloaded from central: https://repo.maven.apache.org/maven2/archetype-catalog.xml (16 MB
[INFO] Archetype repository not defined. Using the one from [org.apache.maven.archetypes:ma
[INFO] Using property: groupId = Servlet_demo11
[INFO] Using property: artifactId = Servlet_demo11
[INFO] Using property: version = 0.0.1-SNAPSHOT
[INFO] Using property: package = Servlet_demo11.Servlet_demo11
Confirm properties configuration:
groupId: Servlet_demo11
artifactId: Servlet_demo11
version: 0.0.1-SNAPSHOT
package: Servlet_demo11.Servlet_demo11
 Y:
```

At the end , type Y and press enter.

```
package: Servlet_demo11.Servlet_demo11
 Y: y
[INFO] ------------------------------------------------------------------------
[INFO] Using following parameters for creating project from Old (1.x) Archetype: maven-a
[INFO] ------------------------------------------------------------------------
[INFO] Parameter: basedir, Value: C:\Users\QSP\eclipse-workspace

```

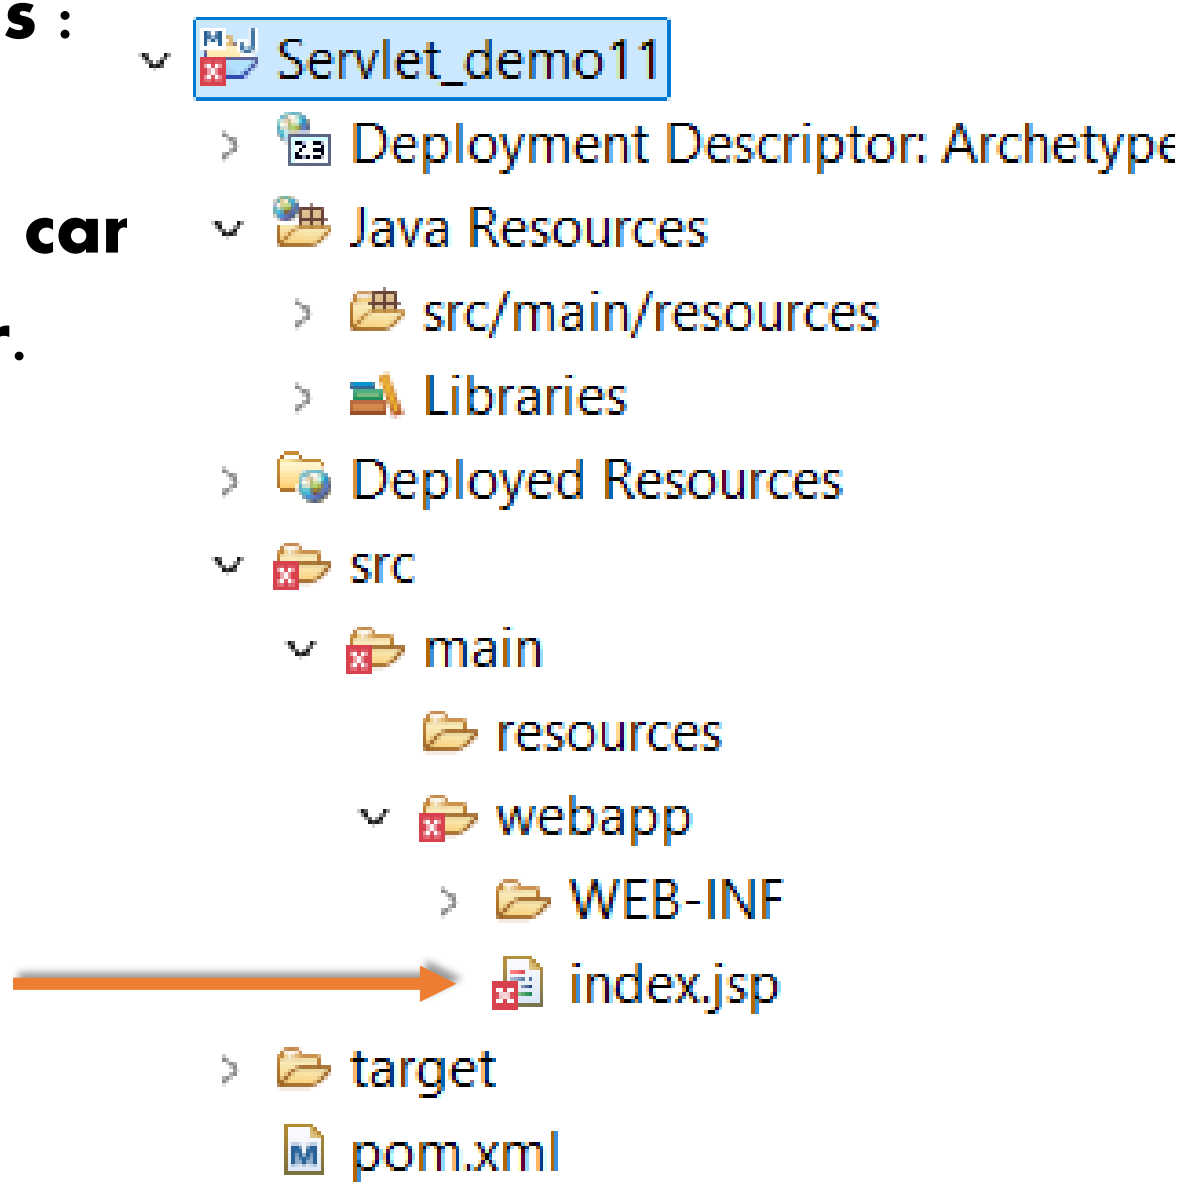

- **After entering Y , once we get as BUILD SUCCESS , project is created.**

- **The project structure looks as :**

- **Once project is created , we car**

Index.jsp file is showing error.

So we can delete the file.

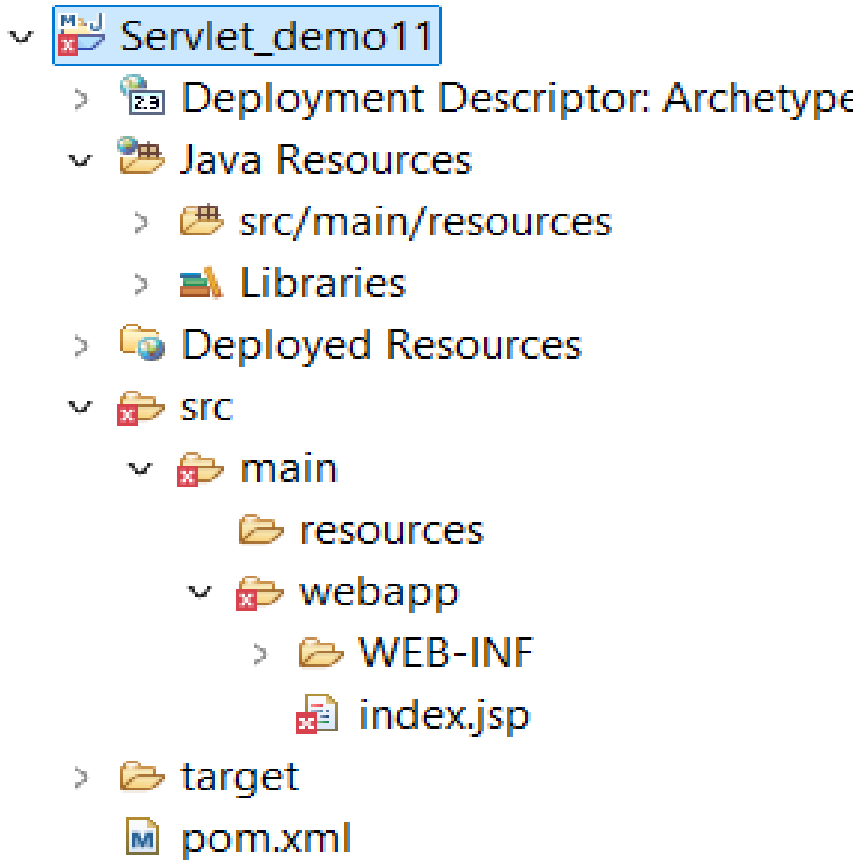

- **Then , open pom . Xml file . Here , <dependencies> tag is already available with a Junit dependency(not Required for us , so we can also delete This dependency). Otherwise , below the junit dependency , add servet-api Dependency from maven repository.**

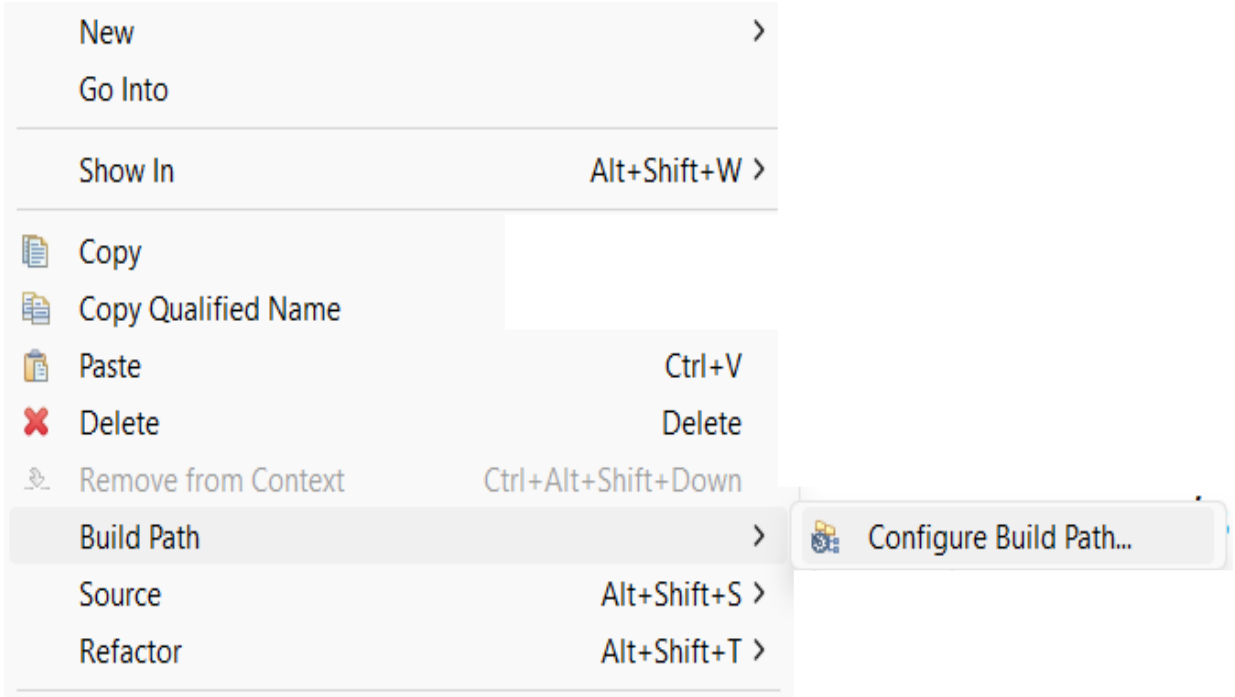

```
<dependencies>
    <dependency>
        <groupId>junit</groupId>
        <artifactId>junit</artifactId>
        <version>4.13.1</version>
        <scope>test</scope>
    </dependency>

    <!-- https://mvnrepository.com/artifact/javax.servlet/javax.servlet-api -->
    <dependency>
        <groupId>javax.servlet</groupId>
        <artifactId>javax.servlet-api</artifactId>
        <version>3.1.0</version>
        <scope>provided</scope>
    </dependency>
</dependencies>
```

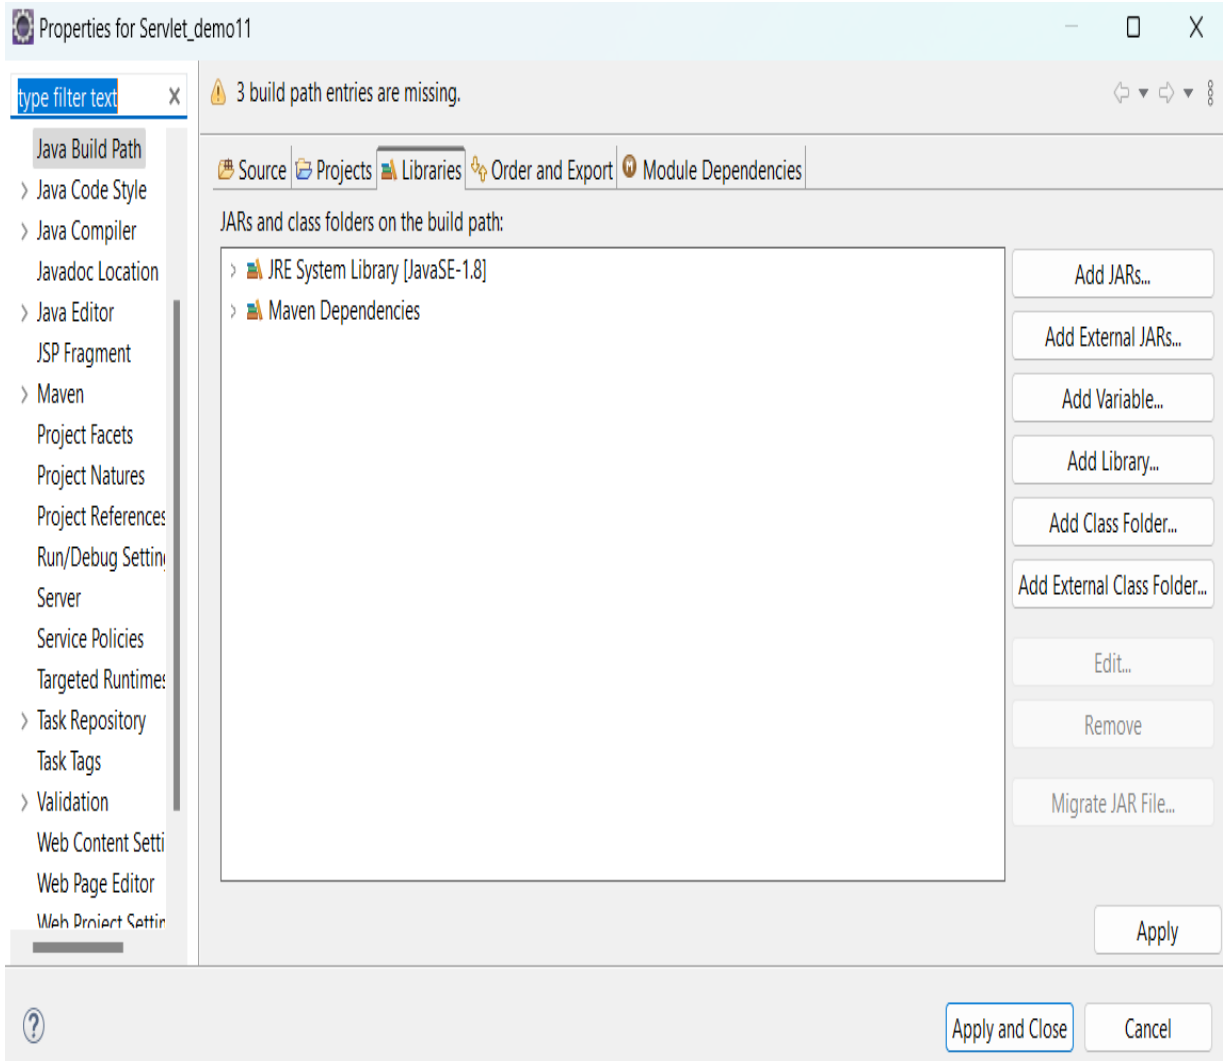

- **All web pages(html files) should be created inside webapp folder and all servlets(java classes) should be created inside src/main/java folder.**
- **But we can see that src/main/java folder is missing in our project.**

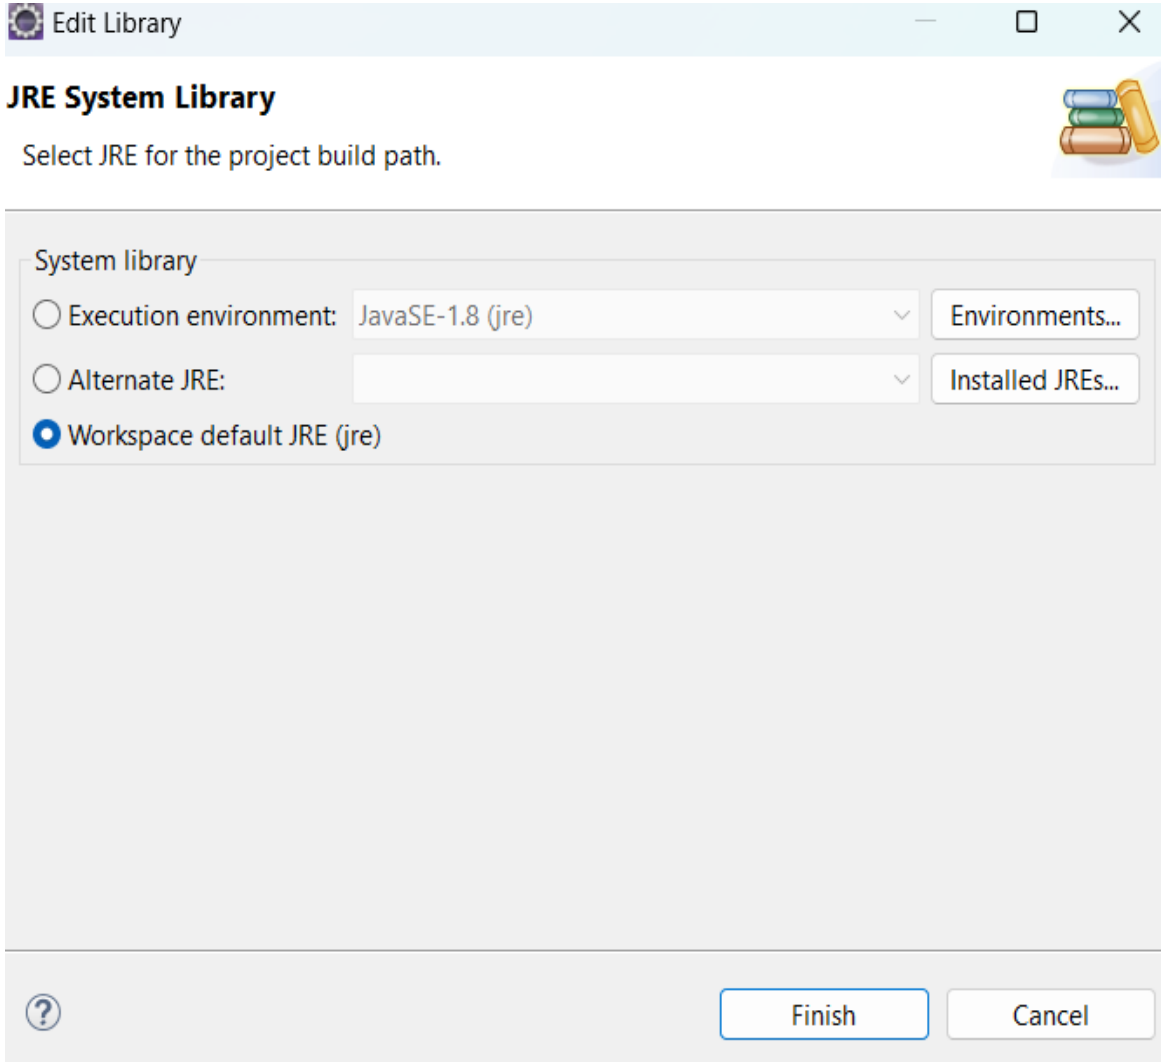

- **Right click on the project and select build path → configure build path.**

- **The following window will open. Here , click on libraries option .**
- **Then double click on JRE system Library and select workspace default JRE and click finish → apply and close.**

Project creation and configuration is competed.
